Dear Esther

My son and I are immunocompromised, already enduring a burden on our liver. We want ZERO glyphosate in our food. We need it labeled so we know what we are eating and can maintain the best health possible.

We do not want any glyphosate exposure to our bodies through food, water or any products. We want the current products which do contain glyphosate to be immediately labeled. The current scientific data and skyrocketing numbers of children and family members with chronic illness and cancer show us that the only ethical action for the CAL-EPA to declare a NO safe level of glyphosate. Zero.

We have already had one member die of cancer. No more. We can take action and precautions. In Carrusco's and Monika Kruger's studies, glyphosate has shown to destroy beneficial gut bacteria at 0.1ppb and promote the proliferation of pathogenic gut bacteria. The gut bacteria is where 70% of the immune system lies, making a child is much more likely to get cancer. Cancer is now the number 1 or 2 killer of children in America.

Do you have anyone who has had cancer in your family yet? I hope and I hope never.

Let's heal. Get rid of the glyphosate!

Best regards

Lisa Zapata
